OEM Recovery Automation: Turning Complexities into Cash.

www.campfire-interactive.com

The Problems with Manual Recovery.

- **Lost Cash Flow:** Refunds expire after five years; cherry-picking big claims leaves smaller but valuable refunds uncollected.
- **Operational Bottlenecks:** Teams spend weeks compiling invoices, bills of lading, and packing slips, slowing every step.
- **Compliance Risks:** Manual spreadsheets and fragmented broker processes create errors, mismatches, and audit exposure.
- **Backlogs:** Refund opportunities pile up—leaving millions locked away and often lost forever.

The go-to platform for Automotive OEM Suppliers.

Campfire transforms OEM Recovery from a costly burden into a fast, accurate, cashflow engine.

By combining AI-driven document processing, built-in compliancevalidation, and seamless integrations, Campfire ensures every eligible refund is captured before it expires.

- **Ingest & Classify** – Drag-and-drop documents or connect to your DMS/forwarders; Campfire auto-classifies and deduplicates.
- **Extract & Validate** – AI extracts line-item data; rules validate HS codes, quantities, and linkages.
- **Assemble & File** – Generate ACE-ready spreadsheets, bundle evidence, and route to brokers/CBP.

The Results: Faster, Broader, Safer Refunds.

Accelerate Cash Recovery

Clear multi-year backlogs and recover refunds before deadlines.

Maximize Claim Value

Capture every refund, large or small, with AI-driven accuracy.

Reduce Risk

Automated checks flag errors, gaps, and duplicates—ensuring audit-ready claims.

Prove ROI

Dashboards track refund totals, back-log burn-down, and cash flow impact.
